# PRINTROVER®

PrintRover® Enterprise™

Secure, Easy, Cost-Effective, Single, Multivendor Print Solution for Organizations

Printing in organizations, a basic requirement, is no longer just a simple, desktop-to-printer operation.

Growing regulations and business requirements for stricter data privacy, confidentiality, and intellectual property rights protection across industries, with stiff penalties and liabilities for violations and breaches, are forcing organizations to review security levels in printing. In addition, the increased usage of smart phones and tablets in organizations is driving the need for better mobile printing functionality on par with the traditional desktop environment. Complicating all of this is your need to also track, control and manage printing across a diverse desktop environment, mobile environment and multiple brands of printers/MFPs in your organization. Not to mention your desire to have a single solution addressing all your needs, while protecting your existing investments in printing infrastructure.

A traditional printer driver from the printer vendor will no longer suffice. Comprehensive solutions from printer vendors or point solutions, if available, from mobile operating system suppliers and others, leave much to be desired in terms of print functionality, accuracy of printed documents, support for legacy printing equipment and overall cost of ownership.

Thinxtream's Print Solutions Group, a pioneer in developing mobile printing apps across multiple mobile operating systems understands your needs. Leveraging our advanced printing expertise, Thinxtream® Print Solutions Group now offers PrintRover® Enterprise™, a single print solution across the organization for all your user devices offering secure, cost-effective, easy, great quality printing while protecting investments in your existing print fleet.

THINXTREAM®

Information Security Compliance

- Authentication of users via integration with organization's Active Directory
- Secure printing to any networked print device in the organization – only users with access card authentication can collect printouts

Multi-vendor Device Choice

- Vendor-neutral solution – support for multi-vendor, networked PostScript®/PDF compliant, print devices – no lock-in to specific brand of print device
- Single solution supporting multiple operating systems – across desktops/laptops, smart phones/tablets

Centralized Tracking, Control, Management

- Tracking of printing across users and print devices
- Control of how users print – direct or secure access
- Control of guest access to print devices
- Printing cost tracking, allocation and management with cross charge/billing options
- Go green and save cost by purging of user's submitted (and yet-to-be printed) print jobs beyond a defined timeline
- Centralized management complementary to existing infrastructure – MDM, VPN, organization App Portal

Easy IT Management

- Single solution to track, control and manage printing across multiple desktop/mobile/print environments in the organization
- Flexible server deployment options – on-premise or on the cloud with Windows Azure™
- Easy installation of software on server, desktops/laptops and smart phones/tablets independent of print devices

Attractive ROI

- Low cost of ownership of PrintRover Enterprise based on number of print devices
- Protection of existing investments in printing infrastructure without compulsory fleet upgrades and vendor lock-in
- Lowered risk of information security violations and breaches
- Low cost of IT management with single solution across multiple desktop/mobile/print environments
- Efficient management of printing cost, including tracking, cost-center allocation, and client billing (where applicable) of printing cost
